Sequence search request for 09/656,640

From: Manjunath N. Rao

Art Unit 1652, Room 10A11 Mail Box in Room 10C 01

Phone: 306-5681

Dat: 10-2-02

Please search the following as soon as possible for application with serial number 09/656,640

SEQ ID NO:1, and 3 against all commercial nucleic acid databases including issued patents database and pending application database and provide a print of all results.

SEQ ID NO:2 and **4**, against all commercial protein databases including issued patents database and pending application database and provide a print of all results.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao, Ph.D. Bi technology Patent Examiner Art Unit 1652, Room 10A11 Crystal Mall 1, USPTO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone ID. A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and '-like protein'. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.
The orientation of the sequence is from SP6 to T7 of the PAC clone. This sequence of p0037C04 clone has an overlap with p0445D12 (DDBJ: AP003046) clone at the position 1 to 45,349 of 5' end. The sequence of this clone starts at the position 95,604 of P0445D12. This sequence of p0037C04 clone has an overlap with p0044F08 (DDBJ: AP002909) clone at the position 48,431 to 137,879 of 3' end. The sequence of this clone ends at the position 89,449 of p0044F08. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  gccaagcgatacaacgcagacggcactctcttctccacc 763

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                               CC DNA encoding phenol oxidase B (see AAB20097). A full-length genomic CC sequence for the phenol oxidase B (see AAB20097). A full-length genomic CC sequence for the phenol oxidase B gene (spoB) is given in AAF30029. CC The DNA was isolated by PCR using primers (see AAF30030-31) based CC on 2 peptide fragments of the isolated enzyme. The invention CC provides phenol oxidising enzymes such as phenol oxidase B, or CC enzymes with at least 68% identity to it, nucleic acids encoding CC them, expression vectors, filamentous fungus and yeast host cells, CC and methods for the recombinant production of the phenol oxidising CC enzymes. The enzymes are useful for bleaching of pulp and paper, CC fabric stains, and in detergent and textile applications. They CC show optimal activity at pH 5-11, 7-10.5 or 8-10, and 20-60 or X
                                                                                                                                                                                                                                                                                                                                 Query Match

Phenol oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to another during detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, belaching the colour of stains on fabric and in detergent and textile
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            applications.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             g
oxidising enzymes may be used in the detergent, paper, pulp, textile and food industries. They are used for preventing the transfer of dyes in solution from one textile to animodifying detergent washing, or in modifying the colour associated with dyes and coloured compounds having different chemical structures, such as in pulp and paper bleaching, bleaching the colour of stains on fabric and in detergent and textile
                                                                            enzyme. The invention relates to detergent compositions comprising more surfactants and a phenol oxidising enzyme having at least 68%
                                                                                                    The

                                                                                                                               The present sequence is that of the Stachybotrys chartarum MUCL 38898 spoB gene encoding phenol oxidase B (see AAB20097). The gene was isolated by PCR using primers (see AAF30030-31) based on 2 peptide fragments of the isolated enzyme. The invention provides phenol oxidising enzymes such as phenol oxidase B, or enzymes with at least 68% identity to it, nucleic acids encoding them, expression vectors, filamentous fungus and yeast host cells, and methods for the recombinant production of the phenol oxidising enzymes. The enzymes are useful for bleaching of pulp and paper, fabric stains, and in detergent and textile applications. They show optimal activity at ph 5-11, 7-10.5 or 8-10, and 20-60 or 20-40 degree C.
                                                                                                       Sequence 2095 BP; 437 A; 618 C;
                                                                                                                                                                                                                                                                                                                                 New phenol oxidizing enzyme, also useful in the detergent, paper and pulp, textile or food industries, especially in modifying the colour associated with dyes and coloured compounds, as well as in anti-dye
                                                                                                                                                                                                                                                                                                                                                                                                                           Wang

                     The present sequence encodes a phenol oxidizing enzyme from the fungus Acremonium murorum. The enzyme has the CBS accession number 157.72. The enzyme catalyses redox reactions and is specific for molecular oxygen as the electron acceptor. The phenol oxidising enzyme is specifically used in detergents for bleaching strains on fabrics, but also for bleaching pulp and paper and for decolourisation of plant-derived food products. The enzyme has a pH optimum in the alkaline to neutral range and can bleach a wide variety of coloured compounds, e.g. porphyrins, tannins, polyphenols, carotenoids, anthocyanins and Maillard reaction products.
